GOLDEN CLIMBER

(MRS. ARTHUR CURTISS JAMES)

Plant Pat. No. 28

A Departure in Yellow Climbing Roses

Many New Features

EXTREME hardiness combined with blooms of Hybrid Tea Type and quality which hold their color. Flowers most always come solitary on stiff strong stems, often 24 inches or longer making a cut flower which has no equal. The bud is long pointed, rich gold with splashes of orange-scarlet which "run" gradually and disappear as the bloom opens. The full blown rose is semi-double, averaging four to five inches in diameter with a heavy tuft of nankin yellow stamens. The petals are gracefully scalloped and curled.

▪ **"GOLDEN CLIMBER ROSES"** have the fragrance of the old Niphetos, so much lacking in our newer roses of today. They are able to withstand sub-zero temperatures without any protection, the plant stays "put" anywhere and its handsome glossy foliage, green wood and red thorn are ornamental even when out of bloom.

▪ **"GOLDEN CLIMBER"** does not make a short blast of bloom like most climbers. Its beauty is long lasting. After the first prolonged period of bloom some magnificent flowers can again be expected and "The Last Rose of Summer" may come from the Golden Climber. Being an extremely vigorous grower, it is one of the most handsome "vines" to cover a fence, trellis, porch, pergola or garage wall. Plant some in your picking garden to supply the home with roses of unusual fragrance and beauty.

▪ **GOLDEN CLIMBER** won the Gold Medal in 1933 awarded by the Massachusetts Horticultural Society given only for exceptional and outstanding flowers, also, The American Rose Society Medal for the best Rose at their 1933 annual meeting.

Plants \$2.00 each \$20.00 per dozen

Order at once (Supply limited at first)

Delivery this Fall or next Spring

Plantings handled at nominal expense
